# LT 1.2 Angles and Parallel Lines

Homework #4: Complete #11-15 all, #17, 18

Honors: Complete #11-15 all, #17, 18

Examples 1–2 In the figure, $m\angle 11 = 62$ and $m\angle 14 = 38$. Find the measure of each angle. Tell which postulate(s) or theorem(s) you used.

11. $\angle 4$	**12.** $\angle 3$	**13.** $\angle 12$
14. $\angle 8$	**15.** $\angle 6$	**16.** $\angle 2$
17. $\angle 10$	**18.** $\angle 5$	**19.** $\angle 1$
